

SUMMARY OF NEWLY DIAGNOSED CASES

NEWLY DIAGNOSED CASES

In January 2022, there were 875 confirmed HIV-positive individuals reported to the HIV/AIDS & ART Registry of the Philippines (HARP) and were accounted to the total (95,212) reported cases since January 1984. At the beginning of this year, immunologic and clinical criteria were considered in identifying cases with advanced HIV disease (AHD^b). Thirty percent (264) had advanced HIV infection (143^b based on immunologic criterion, additional 121 based on clinical criteria).

Ninety-six percent (840) of the reported cases were male. Of the total male cases, 2% (20) identified themselves as female (transgender women) and 26% (216) reported their gender-identity^d as others at the time of testing.

Further, 49% (426) of the cases were 25-34 years old at the time of diagnosis, 32% (283) were 15-24 years old, 17% (145) were 35-49 years old, 2% (17) were 50 years and older, and <1% (4) were less than 15 years old. The median age was 27 years old (age range: 1-67 years old).

Geographic Distribution

The regions in this reporting period with the most number of newly reported cases were National Capital Region [NCR], CaLaBaRZon [4A], Central Luzon [3], Western Visayas [6], Davao Region [11] and Central Visayas [7]. These top regions comprised 81% of the total number of cases in this period [Figure 1].

Anti-Retroviral Therapy (ART)^f

In January 2022, there were 894 people with HIV who were initiated on ART. Eight hundred ninety-three were on first line regimen and one was on second line regimen. The median CD4 of these patients upon enrollment was at 176 cells/mm³.

A total of 56,982 people living with HIV (PLHIV) reported by 161 facilities were presently on ART as of January 2022. Ninety-six percent (54,839) were males. The age of reported cases ranged from 1 to 80 years (median: 32 years old). Ninety-six percent were on the first line regimen, 4% were on the second line, and <1% were on the other line of regimen.

Note: Due to reporting delay, data from the previous month (Dec 2021) with updated ART outcome were used for Eastern Samar Provincial Hospital, St. Camillus Hospital, Salvacion Oppus Yniguez Memorial Hospital, Cotabato Sanitarium Hospital, Metro Antipolo Hospital and Medical Center Inc., Dr. Damian Reyes Provincial Hospital, and Asian Hospital and Medical Center. Mode of Transmission (MOT)

Of the total reported cases (875) in January 2022, 99% (863) were infected through sexual contact. Further, <1% (3) of the reported cases each have acquired HIV through sharing of infected needles and through mother-to-child transmission. One percent (6) had no data on MOT at the time of reporting [Table 1].

HIV/AIDS & ART REGISTRY OF THE PHILIPPINES

The HARP is the official record of total number of diagnoses (laboratory-confirmed), ART outcome status and deaths among people with HIV in the Philippines. All individuals in the registry are confirmed by the San Lazaro Hospital STD/AIDS Cooperative Central Laboratory (SACCL) which is the HIV/AIDS National Reference Laboratory (NRL) and DOH Certified Rapid HIV Diagnostic Algorithm - rHIVda Confirmatory Laboratories (CrCLs). Confirmed HIV-positive individuals were reported to the DOH Epidemiology Bureau (EB) and recorded to HARP. ART figures are counts of HIV positive adult and pediatric patients currently enrolled and accessing Antiretroviral (ARV) medication during the reporting period in 158 treatment hubs and primary HIV care treatment facilities that had reported in the HARP. This report did not include patients who have previously taken ARV but have died, left the country, have been lost to follow-up and/or opted not to take ARV. Lost to follow-up is considered once a person have failed to visit a treatment facility more than 3 months after the expected date of ARV refill.

HARP is a passive surveillance system. Except for HIV confirmation by the NRL & CrCLs, all other data submitted to the HARP are secondary and cannot be verified. Hence, HARP cannot determine if an individual's reported place of residence is where the person got infected, or where the person lived after being infected, or where the person is presently living. This limitation has major implications on data interpretation. Readers are advised to interpret the data with caution and consider other sources of information before arriving at conclusions.
